

Becoming a Bonded Contractor

Contractors who repair, modify, or install new service lines must be bonded and approved to do such work with Citizens **prior** to completing any work. This is in addition to understanding and utilizing the Citizens Water Standards related to service line installation. Contractors must obtain a \$25,000 Plumbers Bond and maintain that bond for 3 years after the service line installation.

The first step in the process to become bonded is to meet with members of our team to discuss your experience and knowledge of the Water Standards. Please contact Mike Elliott, System Integrity Manager, at (317) 263-6482 to schedule a meeting.
